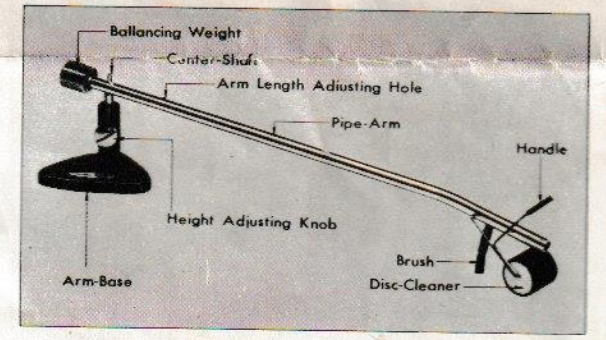
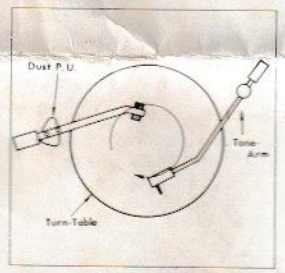
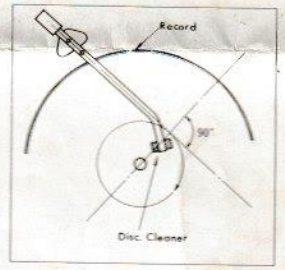
dust pu extra

MDP-3

MICRO







The DUST P.U. "EXTRA" is a high quality product distinguishing by scores of folds from similar ordinary ones already on market. This is of the "Pair Cleaner" system where by a clear brush and a disc-cleaner combined automatically wipe dusts out completely in duplicate.
This is also trouble-free from noise. So, you can enjoy a comfortable record playing.

Features of DUST P.U."EXTRA"

1. It is feasible to remove dusts completely with the "Pair Cleaner" system.
2. Dust cleaning is automatically done while a record being played.
3. This is simply adaptably to any kinds of record players. It is easy to handle it.
4. The Clear Brush can sweep dusts perfectly out of a groove on a disc. (confirmed by a miscroscopic inspection) As elastic animal hairs are used for the brush, the hairy end is delicately fine. (about 0.2mm thinness)
5. The Disc Cleaner can also wipe dusts rejected by the Clear Brush perfectly. The surface of the Disc Cleaner is made of a soft-hairy cloth to absorb dusts.
6. The Disc Cleaner contains materials of porosity inside with anti-static liquid soaked sufficiently, to prevent the disc surface from possible static troubles.
7. The use of the DUST P.U. "EXTRA" makes the life of a costy record and needles extend longer.
8. By cleaning dust on a record up, it can exclude noise, can asure the excellent reproduction performance, and can improve the reproduced tone significantly.

Notice in Use

1. It is necessary to determine the location to set the cleaner after you preliminarily make it sure that it never touches a record player's pick-up arm. (Refer to the above diagram) It is convenient to install an arm basc on the left bottom corner of a player.
2. The pipearm has two holes for adjusting a reach of the arm. The arm length should vary in use in accordance with the size of records, small or large.
3. Elevating a shaft up or down with a screw of the height control is needed to make it fit for the height or thickness of a turn-table. Especially a spare shaft is prepared for an extra high turn-table.
4. It is the best condition for both the Clear-Brush and Disc-Cleaner to stick closely to the record face.
5. The Clear-Brush and Disc-Cleaner should be cleaned each time by brushing with a sub-brush equipped.
6. The anti-static effect will lower and dust absorption will weaken if the cloth mesh of the Disc-Cleaner is clogged with dusts. To effecutate their work sufficiently, it is advisable to exchange the Disc-Cleaner as possible. (with spare Disc-cheaners 2 pcs)
7. The direction of the Disc-Cleaner put on a record is required to keep the end of its pipe-arm tangentially to the round of the record. (Refer to the above diagram)
8. Never pick a handle up too high. You can tenderly handle it so that the Disc-Cleaner may be raised a little.
